Тема доклада: *ASHGABAT – PLACE OF DIGITALIZATION AND EDUCATION*

(АШХАБАД – МЕСТО ЦИФРОВИЗАЦИИ И ОБРАЗОВАНИЯ)

All sectors of Turkmenistan are currently being reformed in accordance with the Concept of developing digital economy initiated by our National Leader. Especially, cities and other social areas of Turkmenistan are continuously being reconstructed and developed in a digital manner. In fact, Ashgabat – the capital city of Turkmenistan is becoming a model in digitalization and education, as students are also included in the digitalization process of the city. Moreover, this year on 25th of May, Turkmen nation will be celebrating 140th anniversary of Ashgabat.

video

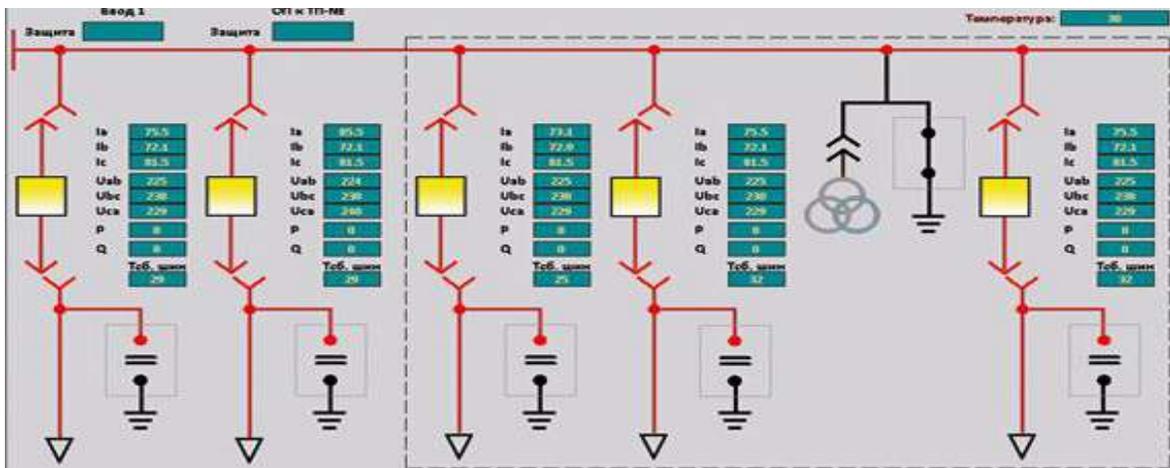

November, 2020. The opening ceremony of the 16th stage of Ashgabat's development with the participation of Esteemed President Gurbanguly Berdimuhamedov made a lasting impression. “Smart Home” intellectual systems have been installed in the homes of these beautiful buildings, which have all the necessary living conditions. Here it is possible to control all electrical appliances remotely, for example, by smartphone or voice command. Particularly, **Turkmen students** took an active part in that project which aimed at digitalization of city and construction of smart homes.

“Digital innovations” competition in “Digital Solutions IT platform” (Economic Society) in Ashgabat

Digitalization process in Ashgabat city also includes power engineering fields. In fact, in 2017, in Ashgabat, there was established a “Paytagt” dispatch center of the “Ashgabatenergo” Production Association. The center was equipped with SCADA (supervisory control and management system) which makes it possible to monitor all the incoming data from substations and remotely control equipment and power lines. The dispatch control center was designed to effectively eliminate possible faults in the power system that may arise due to the power consumption. The place serves as a training medium for undergraduate students as well.

Moreover, in order to accelerate the development of digital education, last year, the Innovation Information Center of the Ministry of Education of Turkmenistan was established in Ashgabat. The main purpose of the center is to provide all levels of education with high-quality e-learning information, to enrich the content of education, and to provide educational institutions with the necessary e-learning aids.

Likewise, digitalization process in Ashgabat city also includes other areas such as medicine, services, education, science, culture and transportation. The important thing is that these fruitful results are being achieved together with students. Therefore, integration of education or knowledge and practice or implementation is highly important task.
