## **The Mixed Messages**

# **Utopia Message 1:**

**Data insights enrich learning  
theories**

## **Data-driven or Theory-driven?**

*research without theory is blind, and theory without research is empty*

– Bourdieu and Wacquant, 1992

“

**coursera**

# Self-Regulated Learning

- MOOC: Serious Gaming MOOC, Erasmus Rotterdam University
- Participants: 655 learners (only 103 active, 2 groups: 39 SRL-W and 64 Non-W)
- Activities: video lectures, reading, quizzes, peer assignments, and discussion forums
- Time frame: 6 weeks

Forethought

Monitoring

Reflection

## 3 QUESTIONS

- 1 Am I using a learning strategy, such as testing myself, to improve my understanding of the course material?
- 2 Am I trying to schedule time to study for this course and observe the schedule as much as possible?
- 3 Have I spent enough time reviewing the videos and doing the activities to remember the information in this course?

## SRL-Viewers

## What was the order of shopped activities?

Table 1. Frequent sequential patterns of learner activities for SRL-prompt viewers and

### SRL-non Viewers

# Remote Labs: Timeline and Tags

The screenshot displays a Remote Labs interface with a timeline and various content panels.

**Timeline:** A horizontal timeline at the top shows dates from 10 to 25. A red oval highlights the date 14, which is associated with the event "Inclusione cervelli in resina". A red arrow points to this event with the word "Tag" written in red.

**Attachments:** A panel on the right titled "Attachments" displays the text "Inclusione cervelli in resina".

**Audio/Video:** A panel on the right titled "Audio/Video" shows two video feeds. The top feed, labeled "11", shows two people in a lab. The bottom feed, labeled "11d", shows a person in a lab wearing blue gloves.

**Question Panel:** A panel at the bottom center displays a question: "What is the purpose of polymerizing the sample at 60°C?". Below the question, there are three radio button options: "I can answer", "I need clarification", and "I cannot answer". The "I need clarification" option is selected and circled in red, with a red arrow pointing to it. Below the options is a text input field labeled "Enter a comment".

**Other Elements:** On the left side of the timeline, there are several document icons labeled "11", "11d", "inclusione", and "blocchetti". At the bottom left, there are logos for "CRS4" and "RIALHE".

# Monitoring and Personalised feedback

The background of the slide features a dashboard with several data visualizations. On the left, there is a table with course statistics. Below the table are two line charts: the top one is titled 'Students by day time learning' and the bottom one is 'Students by day time mode'. At the bottom of the slide is a large stacked bar chart showing data across 18 categories, with a tooltip visible over one of the bars.

|                                                         |                      |
|---------------------------------------------------------|----------------------|
| Course stats                                            | Students by day time |
| Amount of time spent on the course pages by all persons | 827.27 h             |
| Min amount of time spent on the course pages            | 1.00 s               |
| Max amount of time spent on the course pages            | 4.53 h               |
| Avg. duration of the learning session by person         | 19.38 m              |
| Event count                                             | 114552               |
| Session count                                           | 2588                 |
| Persons count                                           | 856                  |

**Issue Identified:** Many students struggle to stay on track with their learning progress due to a lack of timely feedback

**Question:** How can we leverage learning analytics to provide real-time monitoring and personalized feedback?

**Intervention:** Monitor students' activities and provide personalized feedback that is timely, and actionable.

# Ethical Dystopia 3: Platformisation

**Institutional governance practice**

## 5 Principles to guide the collection, analysis and use of student data? (2)

1. If students don't know that you collect their data, as well as the **scope** of data collection, information about **who has access** to the data and under what conditions, **what the data will be used** for, and for **how long** the data will be stored, **you cannot call this caring.**
2. Student behavioral data are **invitations for conversations** about what it means, *not* judgments about we think it means.

## 5 Principles to guide the collection, analysis and use of student data? (2)

3. Just because we have access to their data **does not mean that we must collect**, analyse and use their data.
4. Depending on institutional and regulatory environments, student age and context, students should have the opportunity **to opt-out** of having their data collected and analysed albeit knowing and accepting the implications.
5. There need to be **safe student learning spaces** where we will not collect, analyse and use their data

## Learning Analytics: A Primer

Link:  
<https://colcommons.org/>

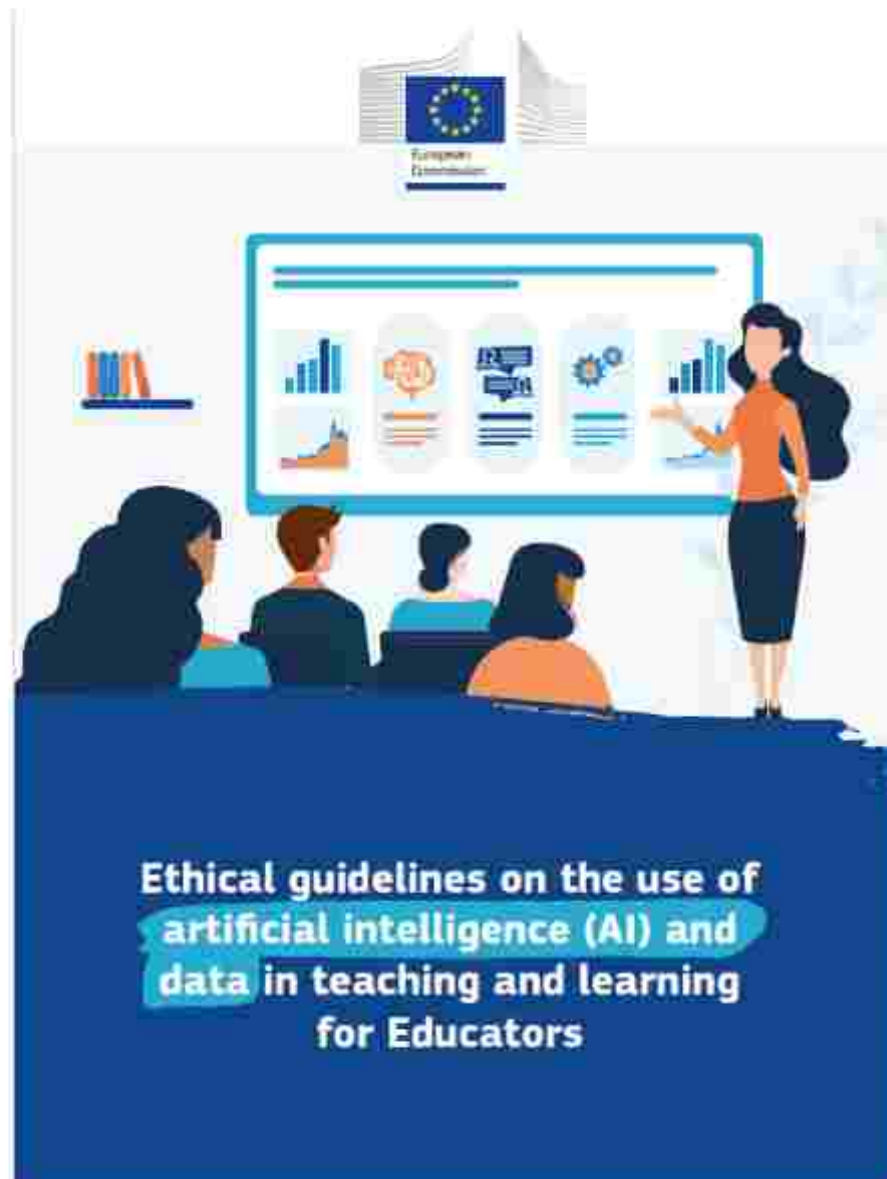

## Learning Analytics: A Primer

### Course Overview

The course will cover all the aspects of Learning Analytics(LA), how it is a surface-level or first-layer introduction to the complex world of learning analytics. It will also demonstrate all the levels of education, from pre-primary to post-secondary and how teachers have a contractual and moral duty to facilitate learning.

**Ethical guidelines on the use of  
artificial intelligence (AI) and  
data in teaching and learning  
for Educators**

Ethical guidelines on the use of artificial intelligence (AI) and data in teaching and learning for educators,  
Publications Office of the European Union, 2022, <https://data.europa.eu/doi/10.2766/153756>

# 4 key ethical considerations for AI in Education

## Ethical Considerations

In developing these guidelines, four key considerations have been identified that underpin the ethical use of AI and data in teaching, learning, and assessment. These are human agency, fairness, humanity, and justified choice.

**Human agency** relates to an individual's capability to become a competent member of society. A person with agency can determine their life choices and be responsible for their actions. Agency underpins widely used concepts such as autonomy, self-determination, and responsibility.

**Fairness** relates to everyone being treated fairly in the social organisation. Clear processes are required so that all users have equal access to opportunity. These include equity, inclusion, non-discrimination, and fair distribution of rights and responsibilities.

**Humanity** addresses consideration for the people, their identity, integrity, and dignity. We need to consider the well-being, safety, social cohesion, meaningful contact, and respect that is necessary for a meaningful human connection. That connection implies, for example, that we approach people with respect of their intrinsic value and not as a data object or a means-to-an-end. It is at the essence of the human-centric approach to AI.

**Justified choice** relates to the use of knowledge, facts, and data to justify necessary or appropriate collective choices by multiple stakeholders in the school environment. It requires transparency and is based on participatory and collaborative models of decision-making as well as explainability.

These ethical considerations are intrinsically valuable and worth striving for in education. They guide educators and school leaders in their decisions about the use of AI systems in education. The key ethical requirements introduced below can help ensure that AI systems used in education and training are trustworthy and address relevant concerns.

# **Final Remarks**

**The need to apply ethical principles to AI  
in education and Learning Analytics will keep  
growing**

**But how can we enforce the ethics?**

**We **need** governments and civil society **actively** to take steps to ensure that learners, educators and all members of society have a strong understanding of AI and its ethical implications.**
